

WHY INVEST IN ANTI-SKID TREATMENTS?

- 75% of accidents in Australia are the result of slips and falls.
- The average compensation claim exceeds \$7000 with the figure rising sharply due to corporate responsibility. (In America that figure is tripled).
- Quick, easy, no hassles!
- No visible change to the treated tile.
- Piece of mind.

DID YOU KNOW?

- Slips and falls are the number 1 cause of claims and injuries in public places (restaurants, hotels, shopping malls and general businesses).
- Only car accidents cause a greater number of accidental fatalities each year than slips and falls!
- Accidental slips and falls account for over 50% of household accidents.

Remove the risk

- Don't be caught after something happens!
- Depending on the system used, you can use the area within minutes of application.
- It's cheap insurance against legal bills and the feeling of knowing a fall that a loved one may take could have been prevented.
- Life expectancy of 4 years plus (depending on the product usage and maintenance).
- Supply and apply or DIY kits available.

Quality

Absolute professionalism of all products and service... It's our promise!

"THE SURFACE IS ACTUALLY SAFER WET THAN DRY!"

WHERE COULD YOU USE ANTI-SKID?

Commercial

- Hotels & Motels,
- Restaurants & Cafes

HOW ANTI-SKID WORKS TO PROTECT YOU

ANTI-SKID SELECTION GUIDE

Which method is best for your situation?

The chemical reaction caused during our simple treatment takes a slippery surface from dangerous to safe without changing the appearance.

By creating thousands of microscopic indentations we are able to change the characteristics of the surface to remove the SKID!

Also, when you follow up by using our inexpensive maintenance cleaner, the results are long term.

2.5L DIY KITS

The ANTI-SKID Do It Yourself 2.5L kit is the perfect product for those people who want to safeguard their home from slips and skidding without the cost of professional applications.

Our 2.5L ready to use formulation will give you enough pre-mixed product to ANTI-SKID approximately 20m² (depending on porosity of tiles). In most situations that would be enough product to treat:

- 2 bathrooms (shower, bath & tiles)
- Laundry
- Front entrance tiles
- Kitchen Tiles

Simply follow the easy to use instructions on the container & you will have a slip free environment that is ready to use immediately... no drying time or nasty smells!

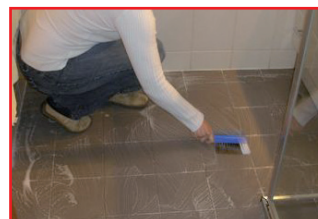

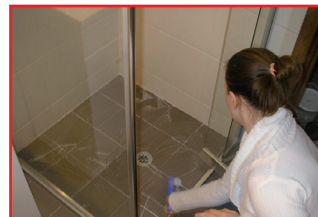

ANTI-SKID

Our neutral floor treatment will not visually alter the appearance of the floor (substrate). By using a passive chemical reaction, your floor will become slip resistant, even under the wettest conditions... in fact the wetter the floor, the better ANTI-SKID works!

Whilst unnoticeable to the human eye ANTI-SKID creates thousands of tiny 'suction caps' within the tile (or applied surface) to stop skidding from occurring.

ANTI-SKID is quick, odourless, fast and effective... no mess, no downtime, no leaving the house, or clearing out customers whilst treatment occurs. Ideal for high traffic areas and residential applications.

"WHY TAKE A RISK WITH THE MOST PRECIOUS RESOURCE YOU HAVE... ONE SIMPLE TREATMENT WILL STOP THE SKID!"

STAINSEAL - ANTI-SKID

Working by creating a non-slip coating on the surface of the floor, our "positive" system includes the added advantage of being a sealer... so stains simply wipe off.

Application is slightly more involved than the neutral system but in most cases the floor is out of service for less than 24 hours.

Stainseal is a grip you can see and feel.

Stainseal is designed for moderate traffic areas such as swimming pools and entertaining areas. In high traffic areas we recommend ANTI-SKID Neutral.

"DOES YOUR FLOOR REACH AS 366.I . . . IF NOT YOU COULD BE HELD LIABLE IN THE EVENT OF A SLIP OR FALL?"
