Yellow Green

Aqua Blue

Add to any Flake Blend

Aqua Blue

Yellow Green sprinkled in to Clear coatings

The technology stems from over a decade of floor coating manufacturing and installation experience. Photo-Luminescence is the transfer of light emitting photons. These Glow Flakes are designed to be incorporated into any resinous floor coating system. Glow flakes can be broadcast into the wet liquid in the same fashion as traditional non-glowing Flakes. Furthermore, the size and shape of these GLOW FLAKES are relative to traditional flakes making it simple to blend in a percentage of glow flakes to your desired Flake Blend system.

Application of the glow flakes is the same as a traditional installation of a seamless flake flooring system.

Available in [yellowy /green](#) & [Aqua Blue](#)

Sizes Micro 1/16" Small 1/4" & Large 1/2"

*Please Note - Glow effect is dependent on amount of natural or electric light the flakes receive prior to darkness. The size of the Glow Flakes preferably larger the better, the amount of Glow Flakes used. Eyes need to adjust to darkness to view full glow effect.
